

# *Multispectral* coatings make *multitasking* easy.

Introducing DSI's Patterned Dichroic Filter.

Our new patterned dichroic filter does double-duty, allowing a single substrate to perform multiple filtering tasks. By combining advanced photolithography techniques with our patented MicroDyn® Technology, we produce ultra-durable coatings that filter a variety of wavelengths, from near-UV to IR, all on the same substrate. Call us today for more information.

Standard and custom coatings
